SUMMARY

Strategic software engineer dedicated to bridging the gap between business objectives and technical execution through Business-Driven Development (BDD). Capitalizing on AI prompt coding to reduce production incidents by 40% and drastically cut rework cycles. Proven track record of end-to-end feature delivery. Recognized for strong communication skills, driving end-to-end feature delivery, and facilitating cross-team collaboration to fulfill business needs and solve complex problems.

Professional Experience

Software Engineer — Doma REI, LLC, Feb 2026 - present

Tech: Trello, OpenCode & Claude AI, Svelte, TypeScript, Docker Containerization, Tailwind, Git Version Control

- Utilized AI to spearhead a comprehensive UI/UX overhaul by replacing fragmented CSS with a unified component library; leveraged global design tokens to automate consistency and reduce styling overhead while ensuring WCAG accessibility compliance.

Software Engineer II — GM Financial, May 2024 - Dec 2025

Tech: CoPilot, Spec Driven Development, Vanilla JS, SQL, C# .NET, CI/CD Azure DevOps, CosmosDB, Postman

- Utilized CoPilot to solve architectural inconsistencies in frontend JavaScript & backend C#.NET codebase, standardizing implementations, and reducing rework while improving release reliability.
- Strengthened BDD by leading cross-functional requirements alignment sessions between product and engineering, translating business goals into precise technical stories, and reducing production incidents by ~40% quarter-over-quarter.
- Addressed instability in legacy .NET services, migrating and modernizing 30% of core services to the public cloud.
- Upgraded frameworks, resolved dependency conflicts, and integrated automated testing, improving pipeline stability and long-term maintainability.

Associate Software Engineer — Makse Group, LLC, August 2022 - September 2023

Tech: Jira, React, Material-UI, Responsive Design, JavaScript, SQL, Git Version Control, XML, API Development, Figma

- Engineered reusable, modular React features, styled with Material-UI, utilizing SQL to optimize data exchange between UI and backend to cut response latency and enhance user experience.
- Worked within a Git-based monorepo architecture to develop and maintain shared React components, frontend features, and shared libraries, enabling consistent UI patterns and improving code reuse across applications.
- Developed RESTful API following OpenAPI and security standards, enabling integration across internal tooling.
- Ensured cross-browser compatibility and mobile responsiveness across supported devices.

Web Developer — Nazwood Millworks, July 2022 - August 2022

Tech: Jira, TypeScript, React, JavaScript, HTML, CSS, Mobile First Responsiveness, Cross-Browser Compatibility

- Built the entire frontend development lifecycle—architecting components, integrating UX flows, conducting browser/device testing, and maintaining accessibility standards.

Education

Louisiana Tech University — B.A. Music Education

Volunteer Work

Sand Springs Baptist Church — HS Boys Teacher, 2025 - present

- Serves as a Sunday morning teacher for the high-school boys class. Participates in and serves as a substitute teacher for the young married Sunday morning class.

Dallas Software Developers Community — Admin, 2022 - 2024

- Facilitated 8 six-week cohort projects with 100+ participants, overseeing 15+ completed projects and achieving an 85% job placement rate, enhancing professional skills and community engagement.

Technical Skills

React, TypeScript, SQL, C#/.NET, CoPilot, GitHub Spec Kit, WebAPI, Azure DevOps

Working Knowledge: Svelte, Azure, Node.JS, Remix, Express, Docker, YAML, Playwright
